RE: Project Completion/ Release Recommendation
100 Commercial Street
Site No. # V001571
Plainview, Nassau County

Dear Mr. Parish:

Staff reviewed the Project Completion and Recommendation to Issue Release dated April 20, 2004 for the Industrial Property at 100 Commercial Street. The New York State Department of Health (NYSDOH) provided concurrence for the soil excavation in October 2001. All portions of the site with volatile organic compound (VOC) contamination were excavated in January 2004. Soil vapor extraction (SVE) techniques were employed to remove residual VOC contamination, confirmatory samples show that the remediation was successful. Soil vapor samples were collected in the source area and indoor air samples were collected from the adjacent building, but no significant soil vapor or indoor air contamination was detected.

The remediation detailed in the April 1998 work plan was successfully completed and groundwater monitoring confirms that the source area is no longer contributing to groundwater contamination. The actions taken are protective of public health.

If you have any questions about these comments, please call me at (518) 402-7870.

Sincerely,

Richard Fedigan, Section Chief
Bureau of Environmental Exposure Investigation
